

POSTOPERATIVE INSTRUCTIONS HIP ARTHROSCOPY WITH LABRAL REPAIR

❖ MOVEMENT

- You can bear weight as tolerated after surgery; however, it is required that you use crutches for 2 weeks postoperatively to provide you with extra stability and to protect your hip. Do not hyperextend or hyperflex your hip. This will be painful. Only move your hip within a pain-free range of motion.
- The day after surgery, once your nerve block has worn off, we encourage you to ride a stationary bike two times a day every day for 5-10 minutes as tolerated. This will keep your hip from getting too stiff immediately after surgery.

❖ BRACE

- A hip positioner brace has been provided for your use. You will need to wear the hinged brace all the time except when bathing for one month after surgery. You must sleep in the brace as well. This will protect the repair and keep you from extending your leg out to the side. The foam booties that come with the brace are only necessary to wear at night while you sleep for the first week after your surgery. This will keep your feet straight and not allow your legs to turn out.

❖ ICE

- An ice machine will be provided to you prior to your surgery. This will help decrease swelling and pain after your surgery. Use the ice machine as much as possible when you get home at intervals of 30 minutes on and off. You should keep the ice machine for approximately two weeks. Do not use the ice machine while you are sleeping.

❖ MEDICATIONS

- If you were given a nerve block for anesthesia, it will wear off over 18-24 hours. During this time you will have little to no feeling in the body part where you had surgery (i.e. leg). Please be careful and use your brace or crutches during this time to avoid any falls after your surgery. Also, an injection of local anesthesia was injected into your hip after the completion of the operation. This medication will wear off in 5 to 6 hours. To control your pain during this transition while the nerve block is wearing off, you are to eat first and then begin taking the **pain medication** (e.g. Vicodin, Percocet, etc) immediately when you get home from surgery. This will prevent you from having severe pain. Take the pain medication every 4 hours until you go to bed.
- The day after surgery you can take 600 mg of Ibuprofen (Advil/Motrin) every 6 hours to help with inflammation and pain. This medication will help cut down the use of narcotic-based pain medication. However, if you still have pain after taking the Ibuprofen, continue taking the pain medication every 4-6 hours as needed.
- A **sleeping medication** (e.g. Ambien) is also provided to help you sleep at night. Take one tablet 30 minutes before you plan to sleep.

❖ DRESSING/BANDAGES

- Your hip dressing is waterproof. You may shower the next day after surgery. Two days after surgery you may remove the entire dressing. Gently wash the wounds with soap and warm water and towel dry. You may then cover the incisions with band-aids until your post op visit.
- Do not take a bath or submerge your hip in water until your incisions are checked at your first post-op visit.

❖ DRIVING

- You may drive 3 to 5 days after surgery if you are not taking pain medication. If your right leg is the operative side, then you must have good control of your leg prior to driving.

❖ APPOINTMENT

- Please call the office prior to, or immediately following, your surgery in order to schedule a postoperative appointment. This should be scheduled 7-10 days after surgery. At that visit your stitches will be removed and you will be given a prescription for physical therapy.
